

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Creating reusable classes so I could access certain modules at different parts of the code .

encapsulating related code into separate functions.

2. What parts of encapsulating your logic were hard?

Error handling when using instances of classes, because parameters would vary.

3. Is abstracting the book preview a good or bad idea? Why?

Yes. Overall, abstracting the book preview overlay into a separate function is a good practice that can lead to cleaner, more maintainable code. It promotes code reuse, readability, and makes it easier to manage and update the book preview functionality in the future.
